

Pour In Place Seat Kit

ISP-1002
"Do It Yourself"
Seat

This is not a beaded seat! No Vacuum Pump Needed!

This is the same specification of foam utilized in all ISP SFI 45.2 products.

The entire seat pour can be completed in a few hours and only consumes about 30 min of the driver's time.

Our pour in place kit has appeared in several periodicals and is the trusted seat for many pro drivers.

Unlike other seats on the market our foam is fire retardant/self extinguishing and comes with extra thick CarbonX cloth.
